

Steps to setup the program

Step 1. Go to PGAdmin and delete the schema named “public” in the RMMangementSystemDB database

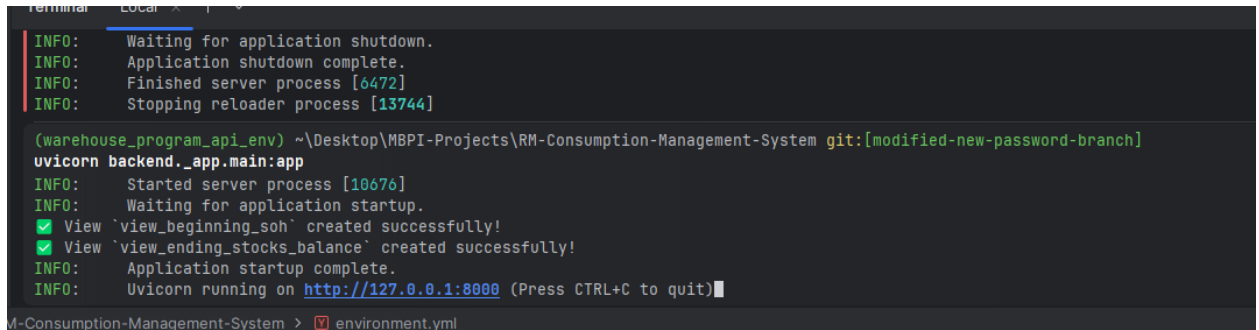

Step 2. After deletion, recreate the “public” schema.

Step 3. After recreating the “public” schema, **create a new environment using the new “environment.yml”**. I added new libraries to this yml file. Once created, activate the environment

Step 4. After activating the environment, **run the server using your terminal:**
uvicorn backend._app.main:app

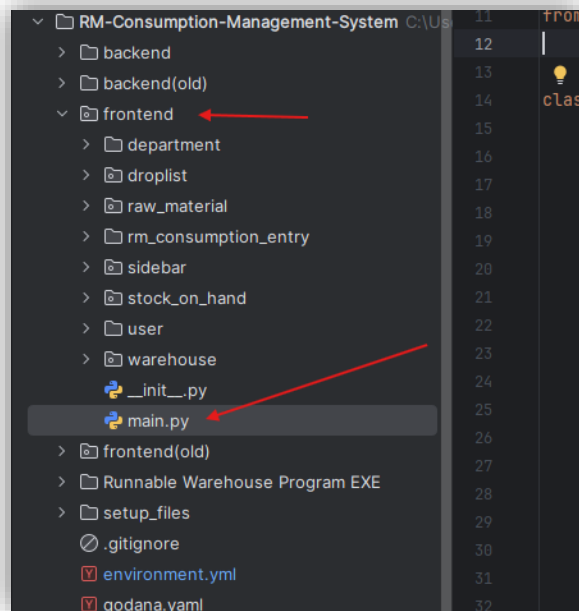

```
Terminal Local x86_64
INFO:      Waiting for application shutdown.
INFO:      Application shutdown complete.
INFO:      Finished server process [6472]
INFO:      Stopping reloader process [13744]

(warehouse_program_api_env) ~\Desktop\MBPI-Projects\RM-Consumption-Management-System git:[modified-new-password-branch]
uvicorn backend._app.main:app
INFO:      Started server process [10676]
INFO:      Waiting for application startup.
✓ View 'view_beginning_soh' created successfully!
✓ View 'view_ending_stocks_balance' created successfully!
INFO:      Application startup complete.
INFO:      Uvicorn running on http://127.0.0.1:8000 (Press CTRL+C to quit)
```

Note: After running the server, the program will automatically create the tables and views tables that are required for the program to run.

Step 5. Run the main.py inside the frontend folder

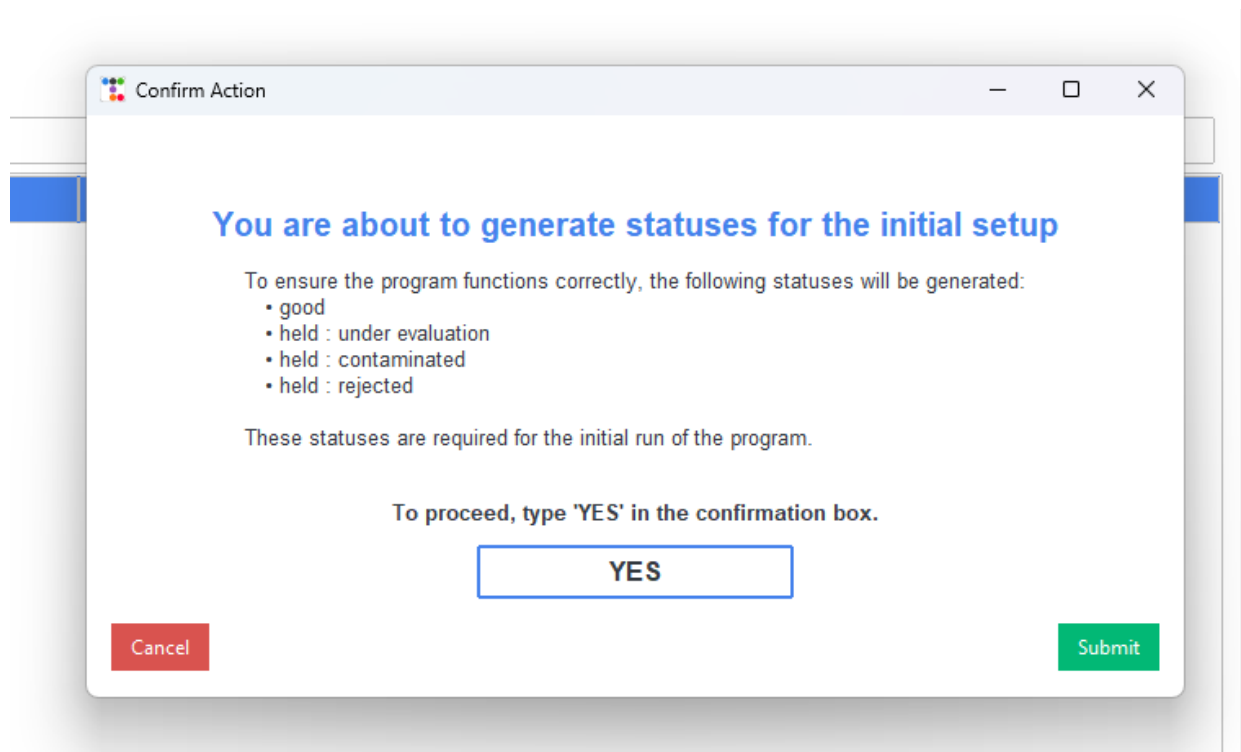

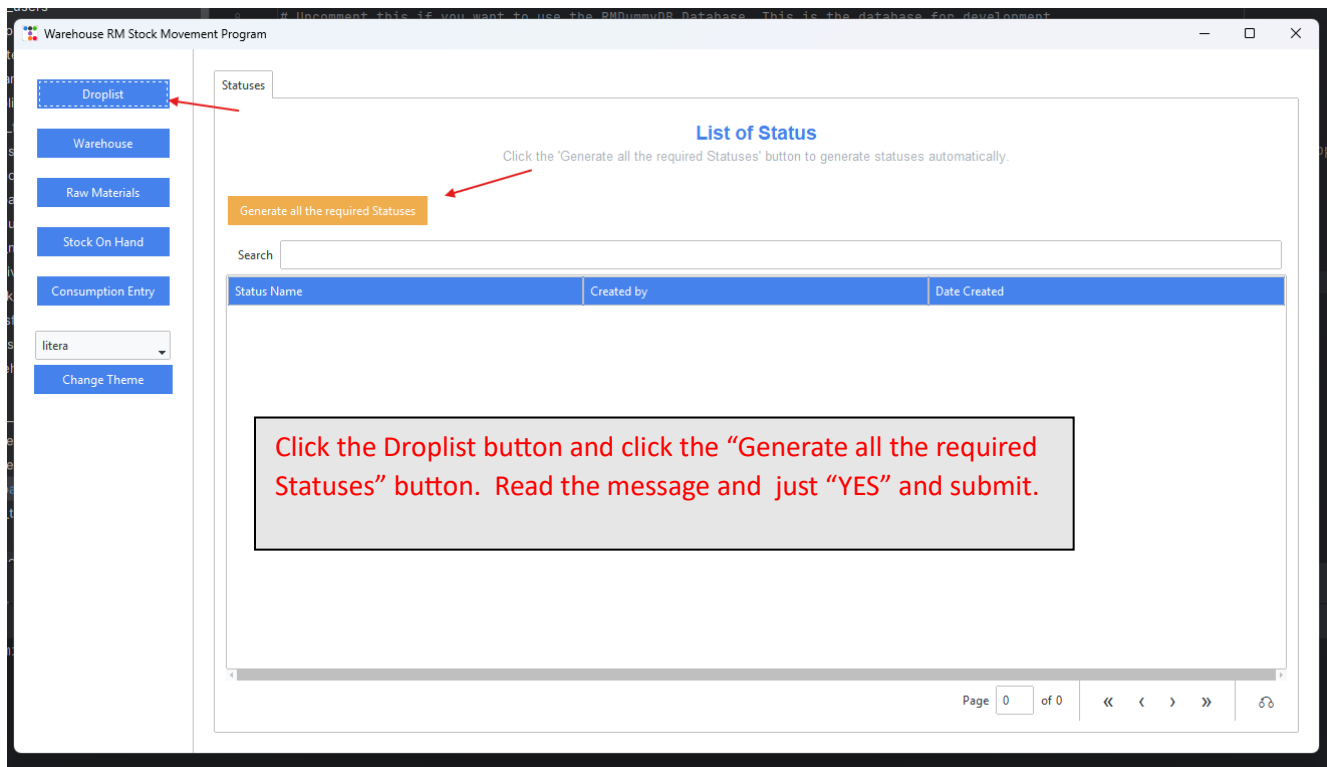

Run the main.py

The screenshot shows the 'Raw Materials Stock Movements' application window. The 'Note Form' is active, displaying the following fields:

- Product Code:
- Lot Number:
- Product Kind:
- Consumption Date:

Below the form is a table with the following columns: Product Code, Lot No., Product Kind, Consumption Date, and Entry Date. The table is currently empty.

Step 6. Create the statuses (good, helds...) by going to the Droplist Module

Droplist

Warehouse

Raw Materials

Stock On Hand

Consumption Entry

Statuses

List of Status

The statuses listed below are essential for the system's functionality. Modifying them may lead to errors.

Generate all the required Statuses

Search

Status Name	Created by	Date Created
good		02/22/2025 11:07 AM
held : under evaluation		02/22/2025 11:07 AM
held : contaminated		02/22/2025 11:07 AM
held : reject		02/22/2025 11:07 AM

Click the Droplist button to refresh the content

Step 7. Create the required Warehouses by going to the Warehouse Module

The screenshot displays the 'Warehouse RM Stock Movement Program' window. On the left sidebar, the 'Warehouse' button is highlighted with a red dashed border and a red arrow points to it. The main area is titled 'Warehouses' and contains a blue button labeled 'Generate all the required Warehouses' with a red arrow pointing to it. Below this button are input fields for 'Warehouse Number' and 'Warehouse Name', followed by a '+ Add' button. A search bar is located below the input fields. A table with the following headers is visible: 'Warehouse Number', 'Warehouse Name', 'Created by', and 'Date Created'. A large grey box with red text is overlaid on the table, stating: 'Click the Warehouse button then click the "Generate all the required Warehouses" button. Just repeat what you did on creating the Statuses/Droplist.' The bottom right corner shows a pagination control: 'Page 0 of 0' with navigation arrows.

Warehouse RM Stock Movement Program

Warehouses

Warehouses

Click the 'Generate all the required Warehouses' button to generate warehouses automatically.

Generate all the required Warehouses

Search

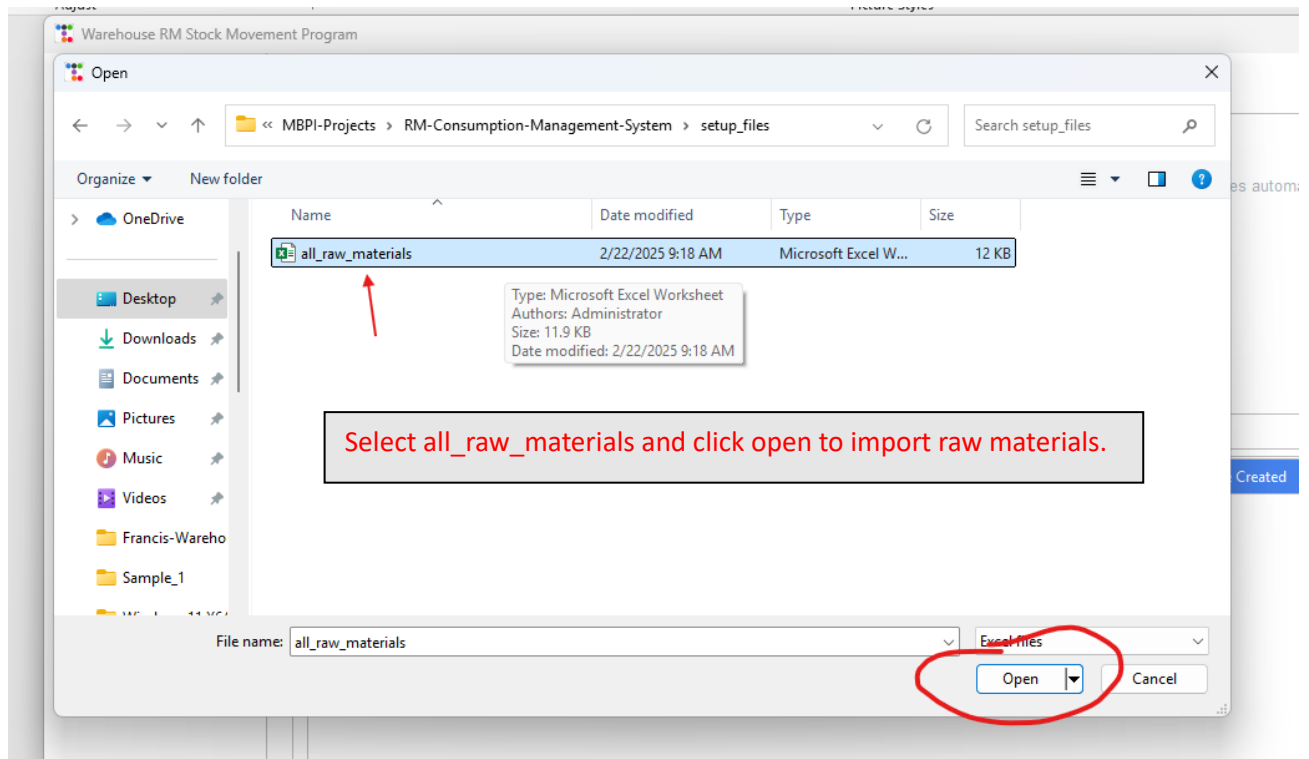

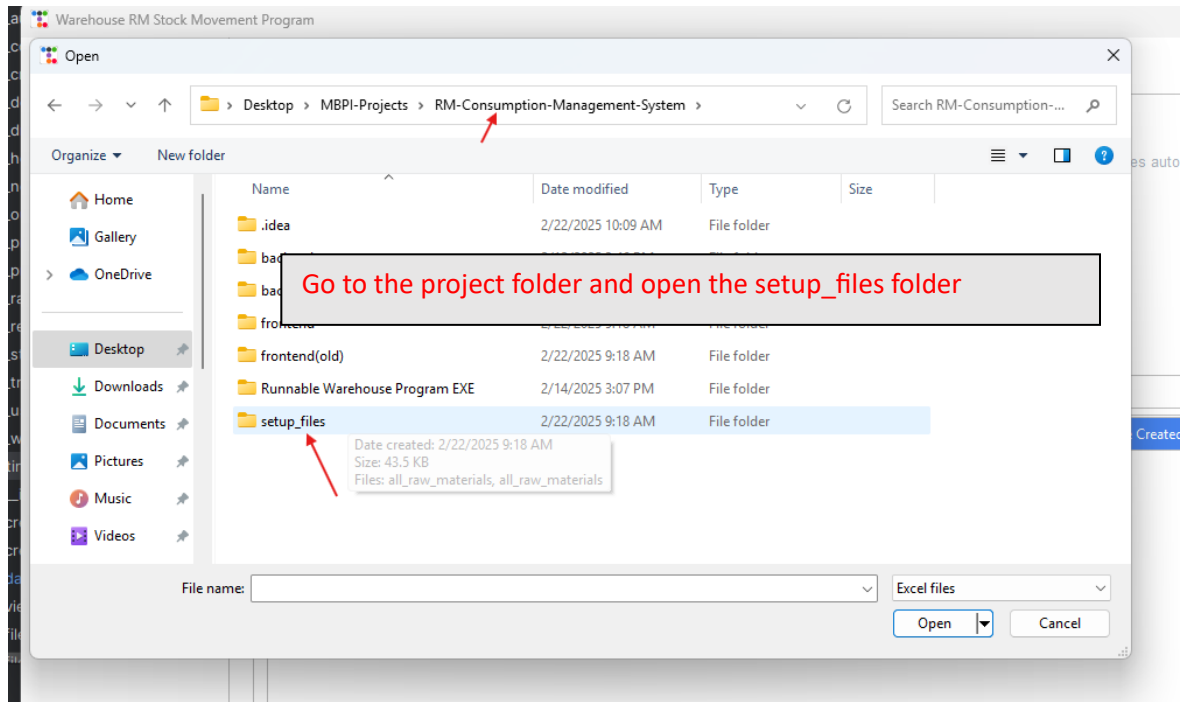

Warehouse Number	Warehouse Name	Created by	Date Created
------------------	----------------	------------	--------------

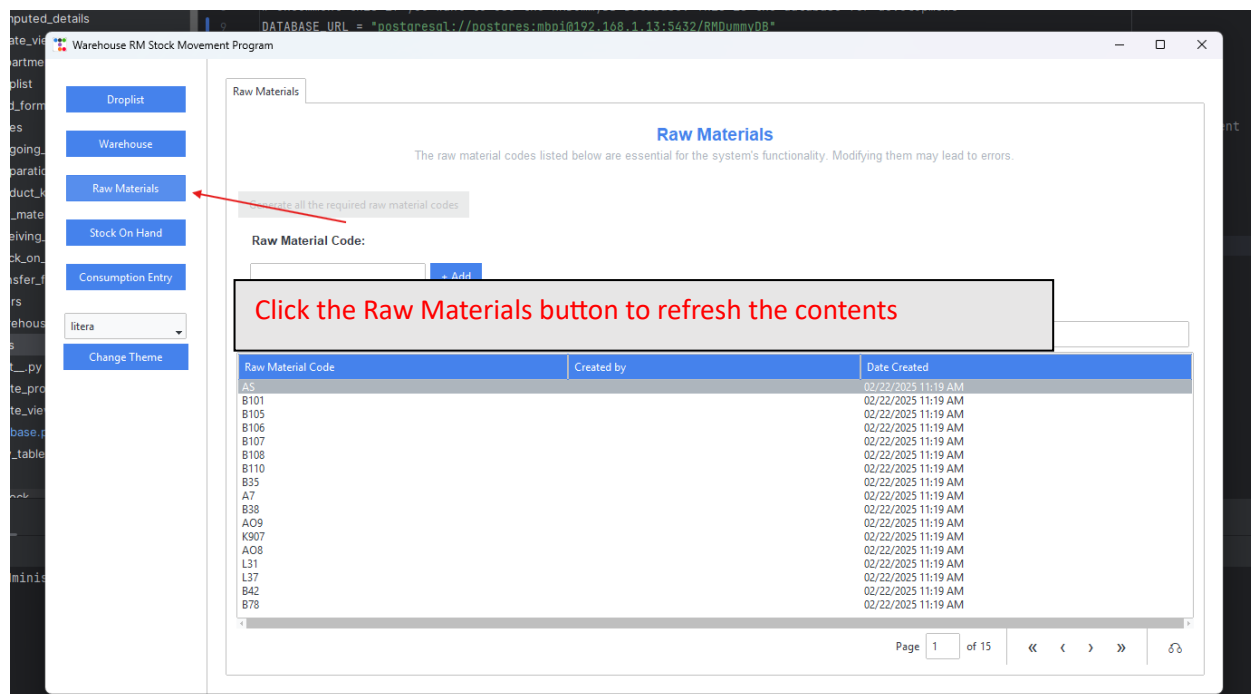

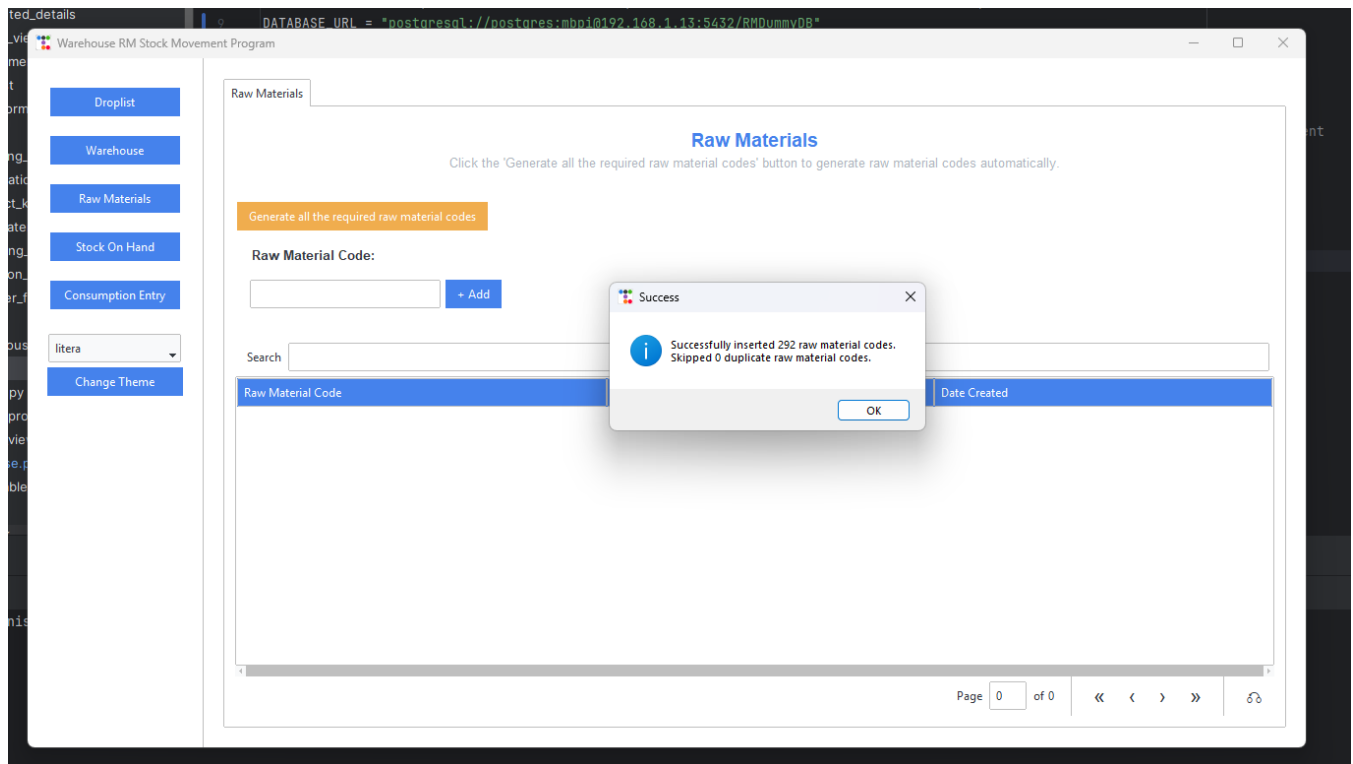

Click the Warehouse button then click the "Generate all the required Warehouses" button. Just repeat what you did on creating the Statuses/Droplist.

Page 0 of 0

Step 8: Create the required Raw Material Codes by going to the Raw Materials module:

You can now import new beginning balance by going to the Stock On Hand module
